## Overview

- ↓ **AURUM allows clients to maintain all web content**  
**Update, manage and create navigation & new pages**  
**Customised to your business requirements, using our core code**

AURUM is a web-based Content Management System (CMS) that we have developed in-house.

AURUM has been designed with end users in mind, and most current users of the product don't have any extensive training beyond basic word processing and web browsing skills. This ensures that all content added to the site adheres to the pre-set site design layout.

All clients using the Aurum CMS are trained and provided with an easy to follow user manual.

With user-based account login's, you can give each staff member their own unique account to use the system.

AURUM also keeps track of all recent actions performed by all administrators.

## Features

- ↓ The Aurum design structure is based on proven MS technologies and SQLServer2000 & ASP.  
 The Aurum system Integrates with our other Systems for easy administration and advanced flexibility.

- Add, edit & delete all text, images & documents
- Secure administration log-in
- Easy upload of images and documents
- WYSIWYG Editor - very easy to use!
- Track recent changes to the site
- Create infinite sub-pages
- Customised to your business operations
- Auto page publish and page removal settings
- Custom design interface
- Add simple forms and online surveys
- ASP and ASP.NET versions
